

Vaccination

Kittens should be vaccinated at 9 weeks. If we have had this done you will be informed and the vaccination record handed to you. Should a follow up injection be necessary you will need to contact your own vet to complete the course. Vaccinated cats will need a yearly booster from your vet.

Neutering

Your vet will advise you when your kitten is mature enough to be neutered, but a rough guide is any time after 6 months. In accordance with the Sanctuary's policy on neutering, you will be given a certificate before you leave with your kitten. This certificate should be kept in a safe place, completed by your vet at the appropriate time, and returned to the sanctuary.
